LGC | Mikromol™

Primary Pharmaceutical Reference Standards and Reference Material Services

From impurity profiling and working standards outsourcing services, to inventory and logistics of your reference standards, we're fully equipped to provide you with a wide range of collaborative reference material management services.
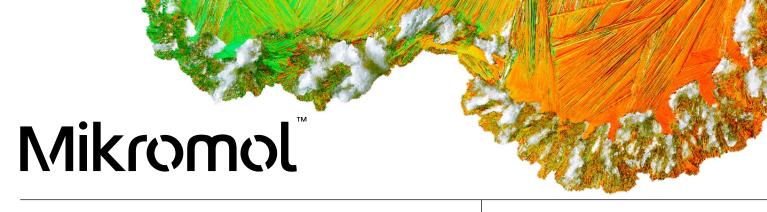

Mikromol's strength in impurity profiling is built on an expert in-house team uniquely familiar with a broad range of APIs, degradation profiles and complex matrices.

Thanks to our company-wide scientific resources and state-of-the art analytical instrumentation, we can offer additional follow up services, including analytical method recommendations, method validation and provision of reference standards for unknown species.

400
new products

Mikromol™

Whether you are dealing with an unknown impurity due to a change of formulation, method, dosage form or even profiling a new API, we can quickly identify your unknown peaks and propose likely mechanisms of formation to keep your project on track.

We understand that you may not always be able to store large quantities of stock on-site due to the capacity and resources that need to be allocated to handling this critical material, so let us handle it for you. Our globally experienced supply chain and export departments effortlessly take charge of the distribution, management, and import.
Custom Reference Standards

We understand that you are constantly discovering new actives and impurities of interest. Each year, our dedicated, highly qualified customs team produces several hundred new materials to fulfil the individual impurity profiling and API qualification needs of customers all around the world – including requests for novel compounds not yet found in our extensive stocked offering or adapted analytical methods and specifications to address your specific application.
