

Neurology

TRC supports research into

Neurodegenerative Diseases and Mental Disorders

- Alzheimer's disease
- Parkinson's disease
- Schizophrenia
- Addiction
- Huntington's disease
- Multiple sclerosis
- Stress and anxiety
- Depression

Advances in immunology, genomics and AI are helping shine a light on the complexity of the human brain as never before, but significant gaps in our understanding are holding back therapeutic development.

TRC offers a uniquely large catalogue of research neurochemicals, from bioactive molecules, APIs, impurities and metabolites, to controlled substances and 21,000+ stable labelled standards. Explore our products for innovative neuroscience research, including:

- Neurotransmission
- Dopamine receptors
- 5-HT receptors
- Adrenergic receptors
- GABA receptors
- Opioid receptors
- Cannabinoid receptors
- Acetylcholine receptors
- Calcium channels
- Estrogen receptors

Can't find what you are looking for?
TRC specializes in solving complex chemical synthesis problems.
